

S hook function:

Secures regulator and hose for travel. MVP Grill: attach S hook to front left hole located in control panel console or on left side handle of MVP Cradle. VARSITY Grill: attach hook through hole located on right side of temperature control valve housing. Then hook the regulator in the opposite end of the S hook between the black plastic propane tank connection collar and the regulator. Note: If you have left off the left side handle due to using the grill with an ice chest, a simple ¼" hole works well to hook one end of the S hook through. Drill a ¼" hole on the lower left corner of the front control panel.
